Errata

Withdrawals

Day 1:

- Esterina Celami, Session 1
- ECR/HDR panel, Session 3

Day 2:

- Joel Glazebrook, Session 4
- Brigid Martin, Session 4
- Lex van der Steen, Session 4 (note: Janar Mihkelsaar's talk will therefore begin at the start of this session - 9:30AM)
- Dina Kafiris, Session 4
- Sean Winkler, Session 4
- Fiona Utley, Session 5
- Oliver Feltham, Session 6

Day 3

- Hannah Stark, Session 8 (note: Simon Lumsden's talk will therefore begin at the start of this session - 11:30AM)
- Leah McGarrity, Session 9

Further information

Day 3, Session 7

Hao Wu, *A Step towards a Systematic Understanding of the Relationship between Reason and Emotion in Philosophy, Psychology and Neuroscience*

Abstract: A systematic understanding of the relation between reason and emotion is still missing. Perhaps, neuroscience, psychology, and philosophy all can play important roles to contribute to such understanding. Neuroscientific phenomena refer to the mental activities, like neuron transmission, and chemical reactions, which can be regarded as the fundamental phenomena; psychological phenomena refer to people's common behaviours and thoughts in different groups, that are classified and conceptualized by psychological theories, which can be regarded as the subsequent phenomena or performance of neuroscientific phenomena; philosophical phenomena refer to people's beliefs, ideologies, and world views, that are formulated based on sophisticated reflection of people's everyday life but more transcendent, which

also can be regarded as the performance of neuroscientific phenomena in a more complex form. The key to form a systematic understanding is to integrate these three subjects by understanding the connections between these phenomena. From a mechanistic perspective, this thesis attempts to suggest a plausible approach to form such systematic understanding.

Bio: I received my first doctoral degree of economics in 2016 from Liaoning University in China. In 2018, I started to pursue my second doctoral degree in Charles Darwin University. This project concerns an interdisciplinary research in philosophy, psychology, and neuroscience. The aim is to explain the phenomena of love and hatred by introducing a new theoretical framework regarding the interaction between reason and emotion, from a mechanistic perspective. I sincerely expect to discuss some original thoughts in this conference with other experts, especially how to form a systematic understanding of the relationship between reason and emotion through an interdisciplinary approach.
